

Mikro. I HO 1

a) Marginalnutten = $U'_1 \cdot 1 \cdot U'_2$

$$U'_1 = \frac{\beta}{x_1} > 0 \quad U'_2 = 4$$

b) $(MRS)_1 = -\frac{\frac{\beta}{x_1}}{\frac{4}{x_2}} = -\frac{\beta}{4x_1}$

c) $U_0 = \beta \ln(x_1) + 4x_2 \Leftrightarrow U_0 - \beta \ln(x_1) = 4x_2 \Leftrightarrow \frac{U_0 - \beta \ln(x_1)}{4} = x_2$

d)

Der er stort meel forstabilitet,
når x_1 er stor nok

e)

$$U = \beta \ln(x_1) + 4x_2 \Leftrightarrow \ln(x_1) + \frac{4}{\beta} x_2 \Leftrightarrow x_1 \exp\left(\frac{4}{\beta} x_2\right)$$

Der er da ikke en monoton transformasjon,

og dermed endres $(MRS)_1$ ikke.
